ACTIVITY-BASED LEARNING REPORT

Design and Development of Three Websites Using HTML and CSS

Submitted by

- **Student Name:** Subhan
- **Roll Number:** 260008
- **Branch:** CSE – Artificial Intelligence and Machine Learning
- **Section:** CSM-1

- **Repository Name:** WD-Activity-Based-Learning

Submitted as part of the Web Development Activity-Based Learning assignment.

1. Introduction

This report presents three webpages developed as part of the Web Development Activity-Based Learning assignment. HTML was used to structure the content, while CSS was used to design layouts, navigation bars, cards, tables, colors, and typography.

2. Objectives

- To understand the basic structure of HTML webpages.
- To apply CSS for styling and page layout.
- To design navigation bars, cards, tables, and content sections.
- To develop three websites based on the assigned case studies.
- To test the webpages in a web browser.

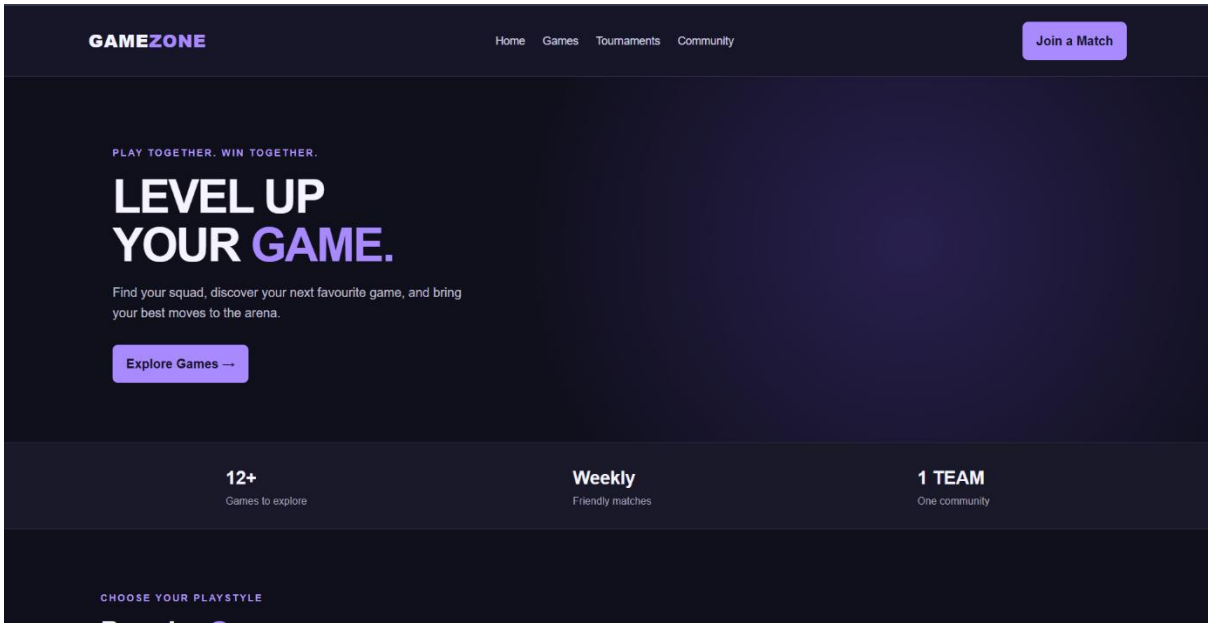

3. Tools and Technologies

- **HTML5:** Used to structure webpage content.
- **CSS3:** Used to style layouts, colors, spacing, and typography.
- **Visual Studio Code:** Used to write and edit code.
- **Google Chrome:** Used to open and test the websites.

4. Selected Case Studies

4.1 Case Study 23 — GameZone

Title: Gaming and Esports Community Website

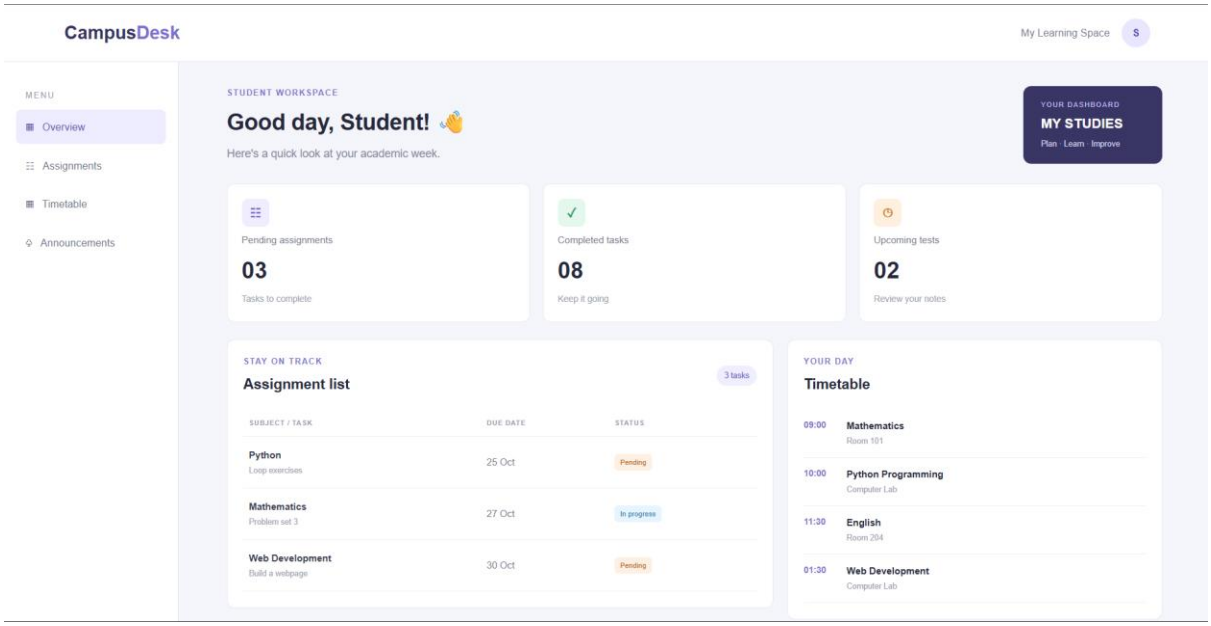

GameZone is a gaming community webpage designed with a dark background and purple accents. It introduces gaming activities and provides navigation to games, tournaments, and community sections.

Main features:

- Gaming-themed navigation bar.
- Hero section with an Explore Games button.
- Gaming community statistics.
- Dark theme with contrasting text and buttons.

4.2 Case Study 4 — CampusDesk

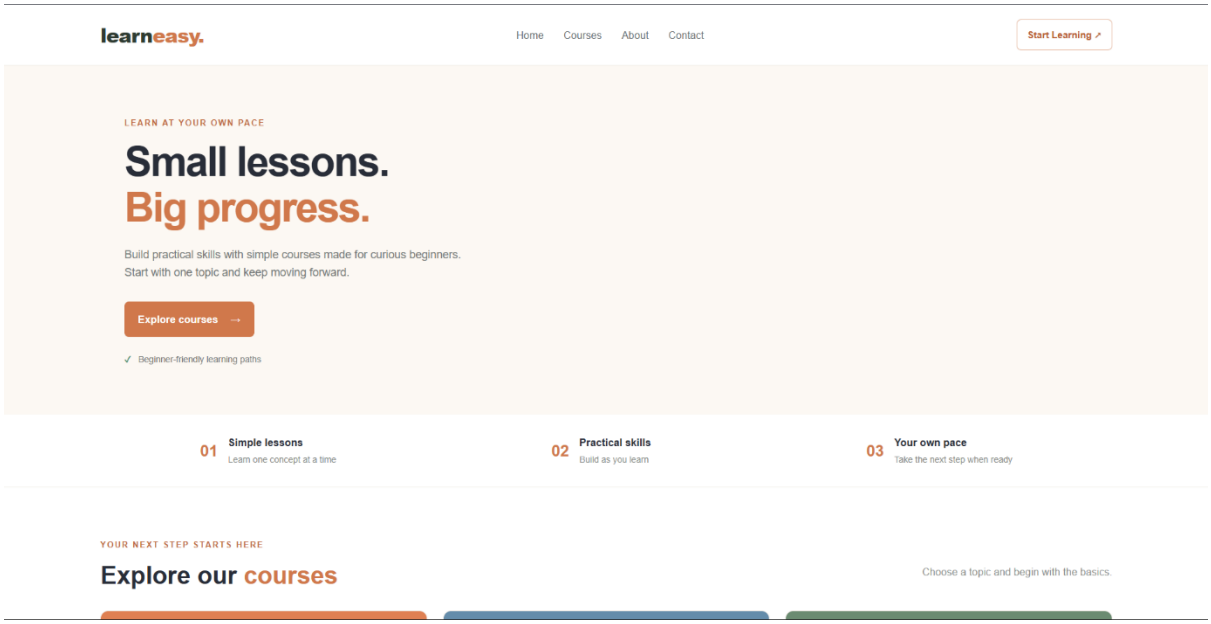

Title: Student Academic Dashboard

CampusDesk is a student dashboard designed to organize academic activities. It displays assignment information, task summaries, and a timetable in a structured layout.

Main features:

- Sidebar navigation.
- Cards for pending assignments, completed tasks, and upcoming tests.
- Assignment table with due dates and status labels.
- Daily timetable with subject names and class timings.
-

4.3 Case Study 3 — LearnEasy

Title: Online Learning Platform Interface

LearnEasy is an online learning interface designed to introduce courses and encourage beginners to learn at their own pace. It uses a warm color scheme and a clear page layout.

Main features:

- Navigation links for Home, Courses, About, and Contact.
- Hero section with a learning-focused message.
- Explore Courses button.
- Benefits section highlighting simple lessons and practical skills.

5. Screenshots of Developed Websites

The following screenshots provide visual evidence of the developed webpages.

Insert the GameZone screenshot here.

Insert the CampusDesk screenshot here.

Insert the LearnEasy screenshot here.

6. Testing and Review

The websites were opened in a web browser to review their appearance and layout. The screenshots show the main visible sections of each webpage.

The following checks should be completed:

- HTML files open in the browser.
- CSS styles are applied correctly.
- Headings, navigation, and content sections are visible.
- Links and buttons are checked for their intended behavior.

7. Conclusion

This activity provided practical experience in developing webpages using HTML and CSS. GameZone focuses on gaming and esports, CampusDesk organizes student academic information, and LearnEasy presents an online learning platform. The activity helped improve understanding of webpage structure, styling, navigation, and layout design.

8. Submission Checklist

- Include the HTML and CSS files for all three websites.
- Upload the project files to the GitHub repository if required.
- Verify that the repository contains all necessary files.
